

Environmental Policy

Background

Australian Decommissioning Services (ADS) is engaged in three activities: specialist decommissioning and demolition; land remediation services and plant dismantling services.

Commitment

Australian Decommissioning Services are committed to ensuring that environmental considerations are an integral part of our decision-making, management and culture.

We are committed to the sustainable use of resources in our operations and the prevention of pollution. We strive to reduce the company's and our customers' carbon footprint by recycling wherever possible or reusing items still fit for purpose.

Making it happen

Australian Decommissioning Services maintains a standard of 'best in class' environmental management in our operations. We continually strive to reduce any negative impact on the surrounding environment by:

- Ensuring employees at all levels, including contractors, are aware of their environmental responsibilities and have adequate authority, training and resources to discharge them;
- Using measurable objectives and targets to evaluate and improve the environmental performance of our operations;
- Ensuring that all operations meet or exceed relevant environmental, legislative and regulatory requirements;
- Continually improving our environmental performance through the proactive monitoring and review of our environmental aspects, policies, procedures and services.

We will ensure that this policy is communicated internally and made available to the public.

Sam Mckellar
General manager

March 2019

This Policy is available in the Project Job Pack, Crib room wall, site office and company Web Site.
